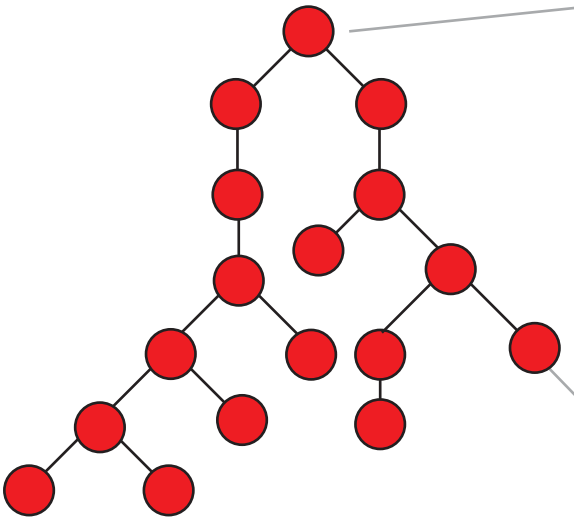
a ranked alphabet

arity 2

arity 1

arity 0

a tree



this node has a label of arity 2, and therefore it has 2 children

this node is child 2 (children are ordered)

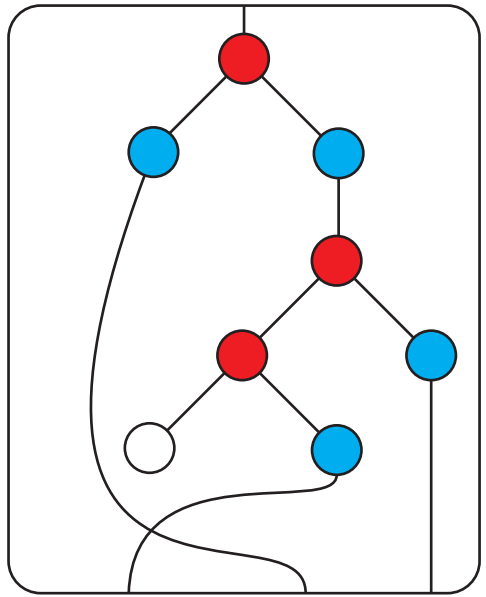
satisfies (*)

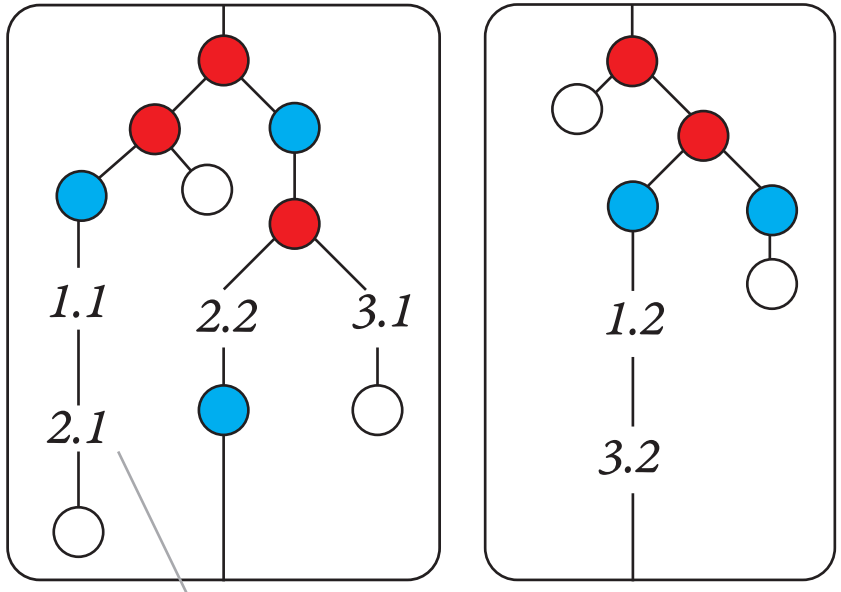
(*)

If the root has arity n,
and $1 \leq i < j \leq n$, then
all ports of the j-th
subterm of the root are
after all ports of the
i-th subterm of the root

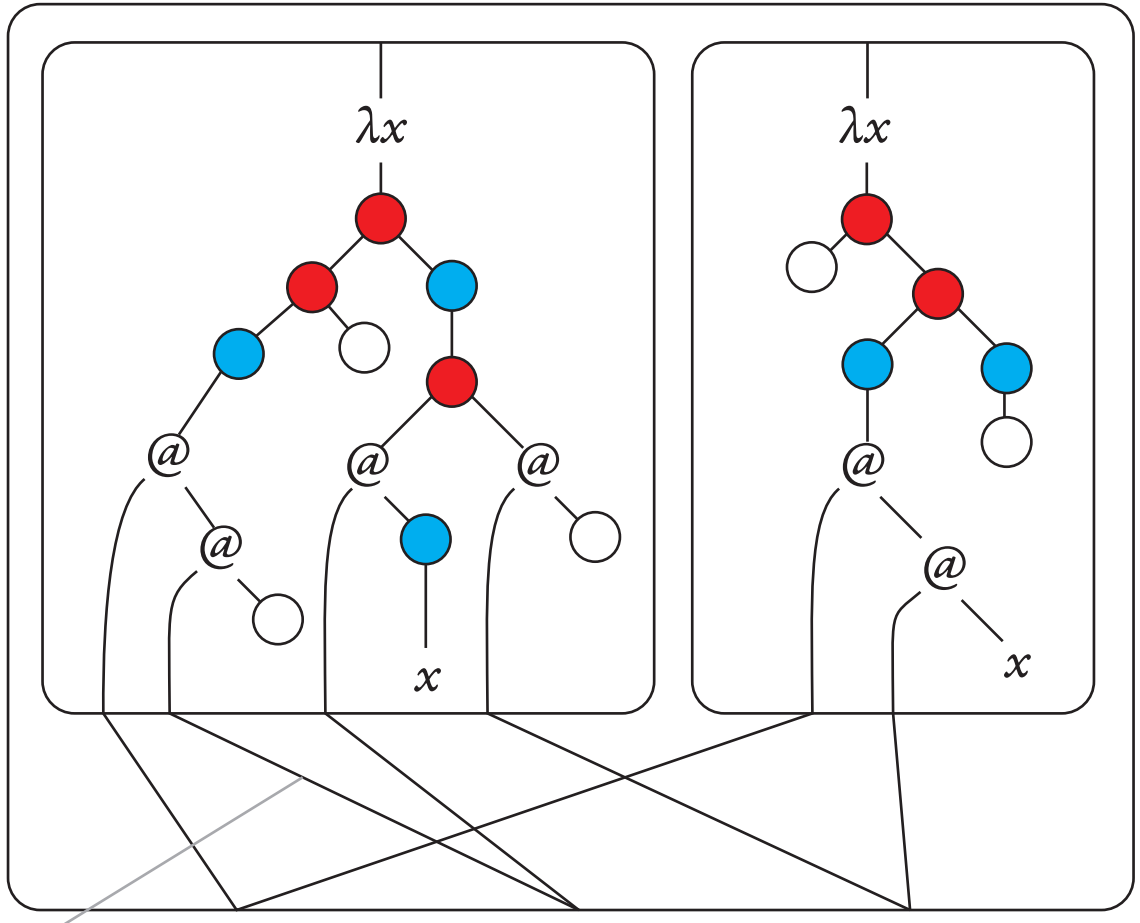


violates (*)

a register update



its dual



Variable *i.j* represents register *i* in the *j*-th argument of the reigster update.
In the dual, this variable is mapped to the *i*-th edge which enters the *j*-th port of the reducer.
